WP1 "Varroa & virosis"	Definition of GBPs										
							Identification and harmonization of methods to be adopted at the apiary level and in the laboratory				
									Review and publication of methods		
WP2 "AFB & EFB"	Definition of GBPs										
							Review of available methods				
							Identification and harmonization of methods to be adopted at the apiary level and in the laboratory				
WP3 "Nosemosis"	Definition of GBPs										
			Evaluation of methods and comparison among OIE methods								
							Identification and harmonization of methods to be adopted at the apiary level and in the laboratory				
WP4 "Aethinosis"	Definition of GBPs										
							Identification of a new hive inspection method				
							New PCR method for detection from debris and soil				
							The yeast <i>Kodamaea ohmeri</i> as a non-invasive indicator of SHB (culture method)				
							Optimize the efficacy of sentinel apiaries in attracting SHB				
							Biosensor development to investigate organophosphates residues in honey				
							Biosensor development for early detection of <i>Kodamaea ohmeri</i>				
WP5 "Validation"	Definition of GBPs and checklist - Coordination of beekeeper associations										
							Publication of the checklist on an online platform and distribution				
WP6 "Economic impact"							Specific online methodology for data retrieval				
							Economic impact given by application of GBPs				
							Ecological and biological impact of the increase in pollination services				
WP7 "New traceability system"	Definition of GBPs										
							Development of a web - traceability application				
							Implementation of the web application with project results				
WP8 "Dissemination & Sharing"							Website development and update				
							GBPs to prevent honeybee diseases printed in Apimondia activities				
							Two publications in Apimondia International Apicultural Congresses and Symposia				
							Participation to one Apimondia event and another international event				
							Sharing with other international research groups
