Overview
Introduction to this module
What is Open Science?
History of Open Science and Open Cultures
Differences in understanding and interpretation of Open Science
Open Scientists share objects to gain network effects for their work
Principles of Open Science
The different dimensions of Open Science
How Open Science impacts you
Creating your digital profile
Barriers and limitations in Open Science
Open Science and reproducible research
Making Open Science part of your daily research workflow
The next parts of your Open Science adventure
Creating your digital profile
Alright, enough talk for now. Or text, anyway. Let's help you build your personal, digital persona that embraces openness! Thankfully, you don't have to start from scratch here, and some smart folks have done a lot of the groundwork for you.
There now exist a range of cool tools that can help you to document your 'open' research practices, and build this in to your own digital researcher profile. Here are some of the most important ones, and then a nice practical task to help you set them up for yourself!
ORCID - This stands for Open Researcher and Contributor ID. ORCID gives you a persistent identifier for you and your research, and is a breeze to integrate with your entire publication record.
ImpactStory - Here, imagine all of the attention your research has received online brought to you in one place, linked with your ORCID profile, and displayed with cool badges and summaries? ImpactStory cleverly does this, and tells you your, er, impact story!
Publons - Don't you just hate it when you do a peer review, and then pretty much no one knows anything about it? Don't you want credit for all your hard work? Publons gives you a place to do that!
Open Science Framework - An open source software project that facilitates open collaboration in science research. OSF currently also hosts a range of preprint servers and much more!
OK, let's go to Task 2 and get you set up with these.
Before you start, please be aware that Publons recently got acquired by the for-profit company Clarivate Analytics recently. While such acquisitions are fairly commonplace in this ecosystem, we want to make you aware that if you sign up to this organisation, while it does provide a value to you, it also uses you as the product which it uses to sell services. We recognise that some of you might be uncomfortable with this (think Facebook for peer review), and therefore this stage is totally optional based on your own values here.
Task 2: Developing your digital researcher profile

How to use Open Science to become more visible and amplify your work

www.opensciencemooc.eu
www.eliademy.com/opensciencemooc
@OpenScienceMOOC

CC 0 ZERO

This is all online!

- Navigate to

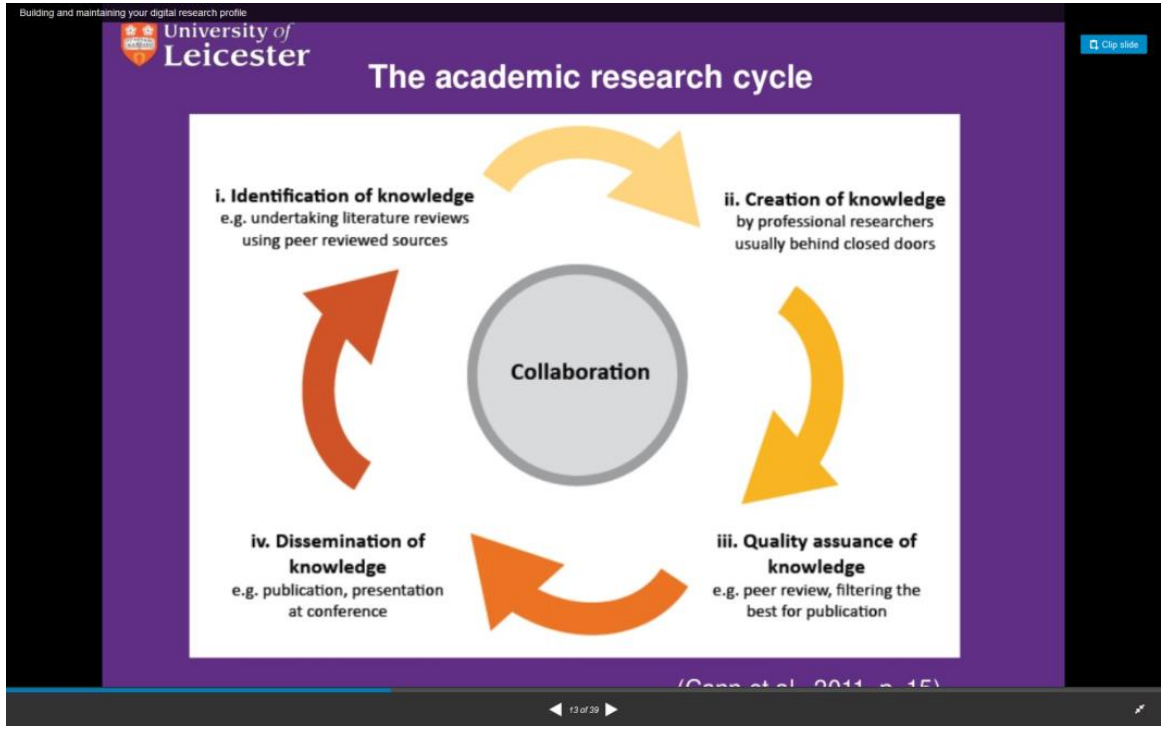
https://github.com/OpenScienceMOOC

- Go to Module 1, Open Principles
- Find the content development folder
- Locate Task 2 – available in markdown, as a PDF, or in iPython notebook format

https://github.com/OpenScienceMOOC/Module-1-Open-Principles/tree/master/content_development

Developing your digital researcher profile

- for researchers who want to help to build their online profile while helping **to amplify their work**
- Think of this task like a way of creating an **online CV** for showcasing your research



The four platforms of the open apocalypse

- **ORCID**
  - A persistent identifier for you and your research
- ImpactStory
  - A place to document how your research has been shared and re-used online
- **Publons**
  - A place to document your peer review activities
- Open Science Framework
  - A place to openly collaborate on your research

ORCiD

Welcome to ORCID!

Learn about ORCID and how to make the most of your ORCID iD

Distinguish yourself and get credit for all your research activities

Popular topics

- Register your ORCID iD
- Register an API client
- Reset your password
- ORCID, GDPR, and your rights as a user
- Add an alternate sign-in account with Google, Facebook, or your institution
- Adding works to your ORCID record

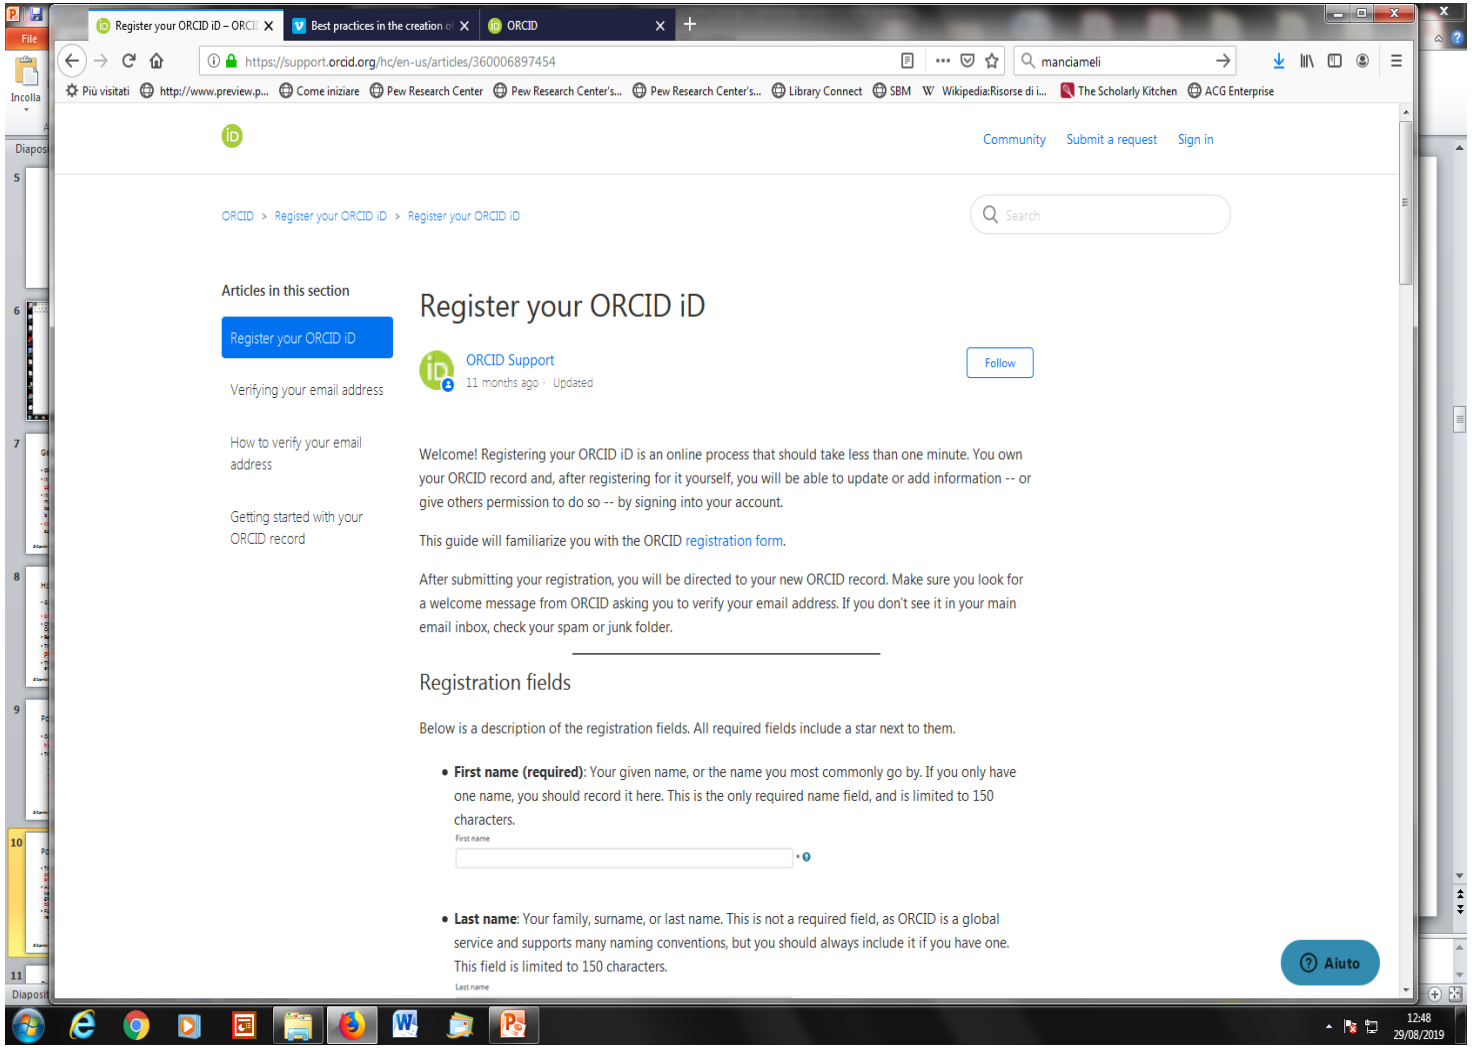
Getting your ORCID account

- **ORCID** stands for **'Open Researcher and Contributor ID'**
- It provides you with **a persistent digital identifier** that distinguishes you from every other researcher
- It also neatly integrates with **key research workflows** such as manuscript and grant submission, **supports automated linkages** between you and your professional activities ensuring that your work is recognized
- Many journals now require you to have an ORCID profile when submitting manuscripts for publication

How to register for your **ORCID account**

- Go to the **ORCID website** and click the 'Register now' link
  https://orcid.org/
- Enter your name, email address, and password
- Choose your visibility settings. You can change these for each item in your ORCID profile later if needed
- **Register**
- That's it! Congratulations, you now have **a unique and permanent ID** for your research profile!
- Throughout your research workflow, you'll notice ORCID coming up more and more, and now you will be well prepared for when it does

https://support.orcid.org/hc/en-us/articles/360006897454



characters.

First name

- **Last name**: Your family, surname, or last name. This is not a required field, as ORCID is a global service and supports many naming conventions, but you should always include it if you have one. This field is limited to 150 characters.

Last name

- **Email addresses**:
  - **Primary email (required)**: Your primary email address, entered twice for confirmation. You will use your email address (or ORCID iD) with your password to sign in to the ORCID Registry.

  - **Additional email (strongly recommended)**: Your secondary (backup) email address. It is strongly recommended that you provide at least one additional email address on registration. This will ensure you can still use your ORCID record if you lose access to your primary email. If you added an institutional email as your primary address, we recommend adding a personal one as backup. You can use any email address connected to your ORCID record, with your password, to sign in to the ORCID Registry. You can add as many additional email addresses as you wish.

  - **Email error messages**:
    - **An account already exists**: You will see a warning message if your email address is already associated with an ORCID iD. You cannot create a second account using the same email address. Reset your password to restore access to the account.

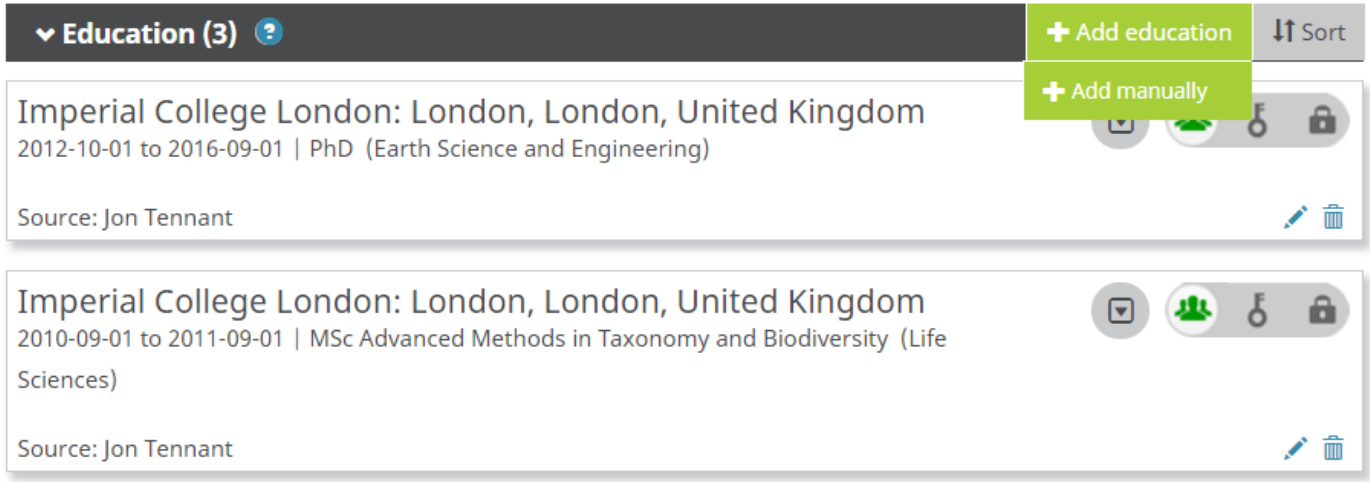
Aiuto

Populating your ORCID profile

- OK, so now you have your ORCID profile

  it's time to add some CONTENT to it!

- There are several key areas here:
  - Education
  - Employment
  - Funding
  - Works (papers, posters…)
  - Peer reviews



Populating your ORCID profile

- The great advantage that ORCID has here is that this information can be **ported into other systems**, so stops you having to enter the same data over and over again across different platforms
- Here, you can also **enter information** such as your country of residence, keywords, your website, emails, and other IDs that you might have. It's a good idea here to enter **a nice, simple, but comprehensive and professional biography**
- For now , there are three ways to help add scholarly works to your ORCID record
  - Direct import from other systems;
  - Import/export via BibTeX;
  - Manual addition

Direct import of published works

- Click **the Search and link option**
- Define the work type and **geographical area**. Each time you select one of these, it w ill change **the organization options** available for you
- Each time you click one of the options, it will take you to the 'oauth' authorization page. Here, make sure only **to authorize sources that you trust (which is basically all options) to help keep your data safe**
- After authorizing, you will be taken to the relevant search page for whichever organization you chose (e.g., CrossRef), automatically populated with a search result for your name
- Now you can simple select which works you want to be added to your own personal profile
- Repeat as needed for each organization until you are happy

Solution home / ResearcherID comes to Publons / General info
What is happening to ResearcherID?
Modified on: Tue, 2 Apr, 2019 at 4:04 PM
During 12th - 14th of April, all public ResearcherIDs will be moved to Publons. From 15 April 2019, Publons will be the new environment where researchers can benefit from an improved Web of Science ResearcherID.
ResearcherID identifiers, claimed publication history and other ResearcherID account information will be moved to Publons. All existing links to ResearcherIDs will redirect to the new Web of Science ResearcherID, hosted on Publons, including from any ResearcherID badges created.

About your Publons profile
Modified on: Thu, 17 Jan, 2019 at 9:40 AM
Your Publons profile is the public facing element of your Publons account where other members of the community can see the publications, verified peer reviews, verified editorial board memberships, and editor records that make up your verified record of contributions to research.
Your Publons profile is broken into five distinct sections. Follow the links below to learn more about each:
What is my profile card?
What is my profile summary page?
How are my publications shown on my profile?
How is my peer review activity shown on my profile?
What is the metrics page on my profile?
Did you find it helpful? Yes No

Build your peer reviewer profile with **Publons**

- **Publons** is a platform for researchers to track, verify, and show case their reviewing and editorial contributions for academic journals.

  https://publons.com/

- It also has the Publons Academy, designed to help with training early-career researchers with peer review

- In 2017, Publons was acquired by *Clarivate Analytics*, the company which includes products such as Web of Science (and the impact factor), EndNote, and ScholarOne

Import your publication record from ORCID

- To do this step,

simply click 'Publication records' on the left hand side, and then 'Import from ORCID' to populate your publication profile

- Displays citations, Altmetric score, and review status alongside all articles

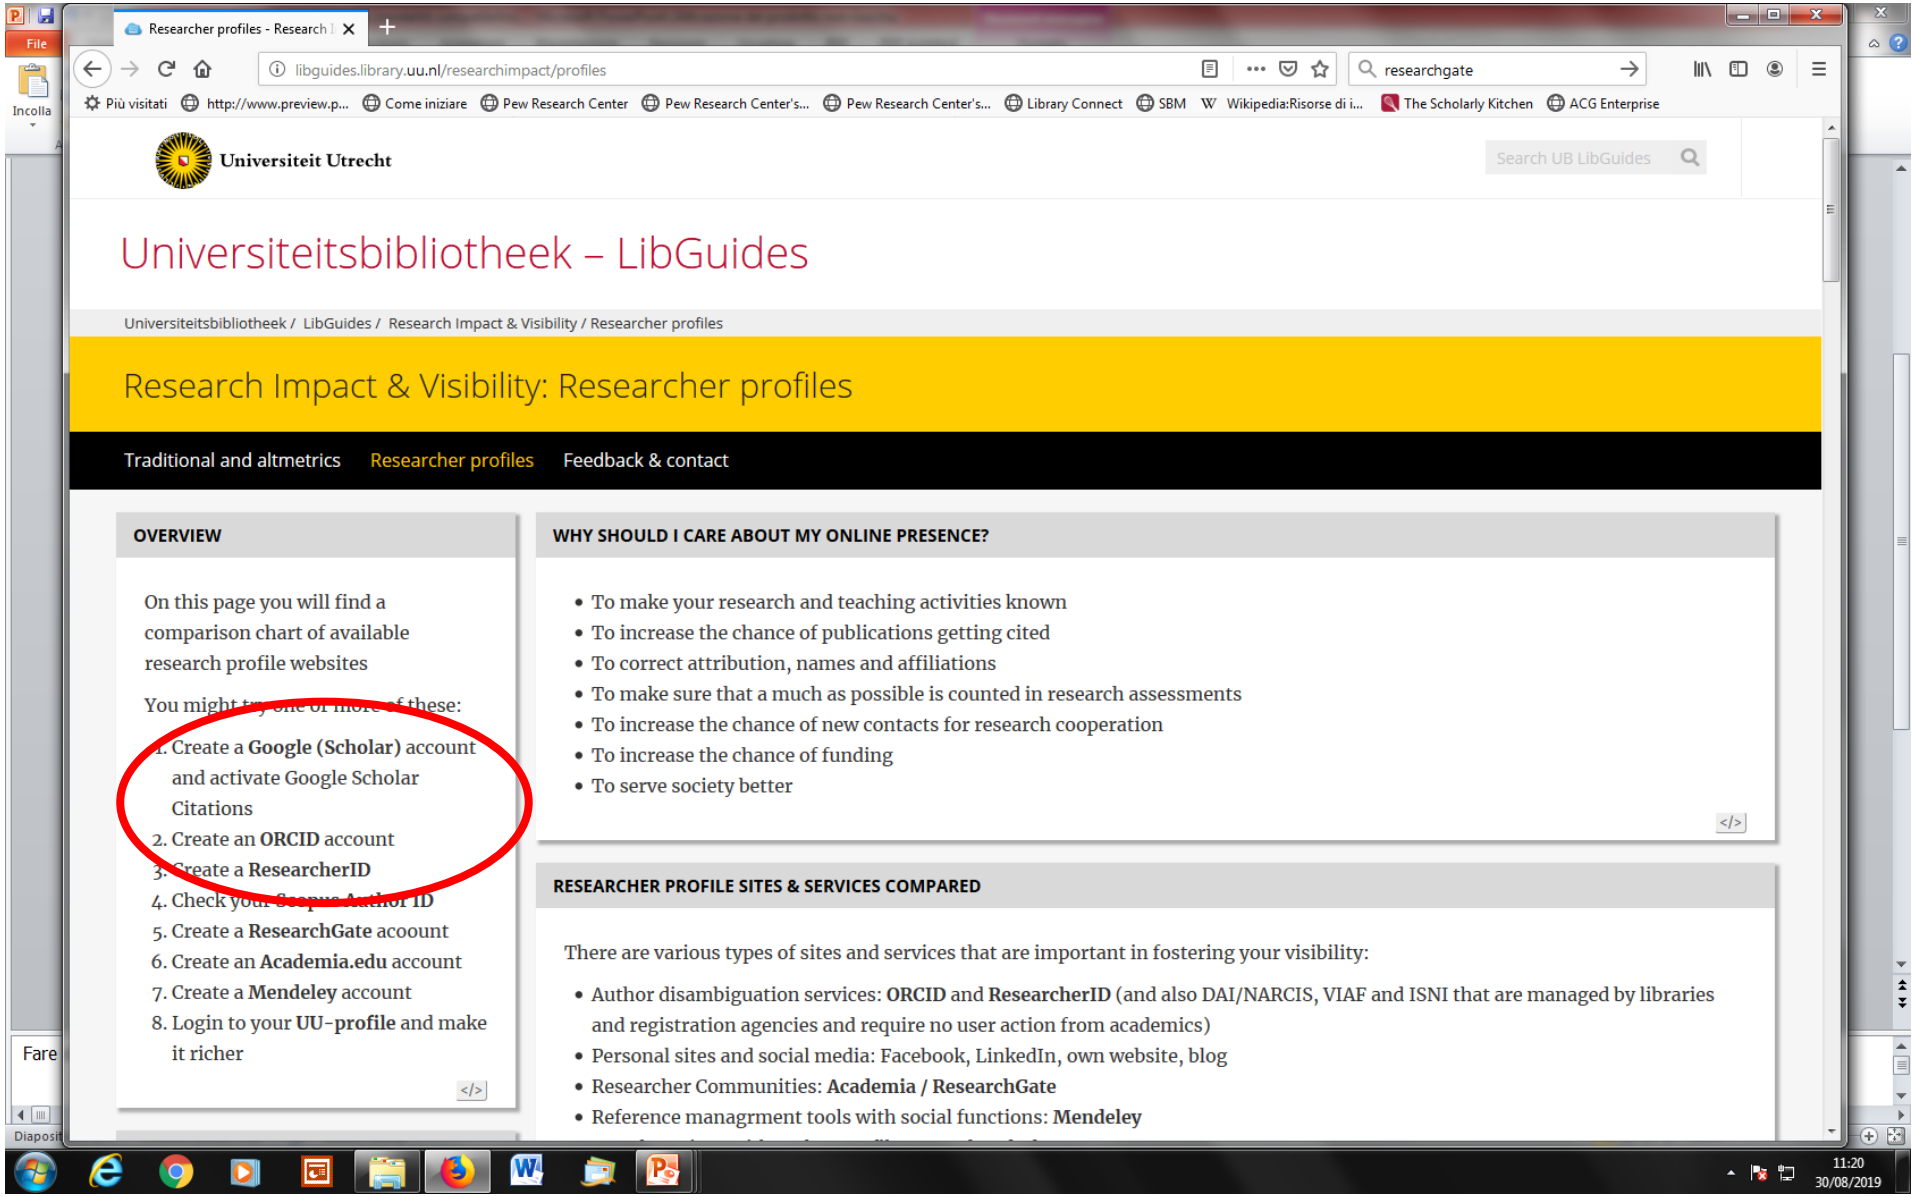
Guida della Università di Utrecht

http://libguides.library.uu.nl/researchimpact/profiles



homepage and a full list by clicking "my updates")

- You can track new papers and citations (of yourself and/or others)
- More about Google Scholar Citations
- More on Google Scholar in general in in the LibGuide Google Scholar

NB Because new articles are automatically added to authors' profiles it is wise to check regularly, because in rare cases articles may be wrongly attributed to you.

MORE VISIBLE WITH ORCID IN THREE STEPS

ORCID (**O**pen **R**esearcher and **C**ontributor **ID**) is a non-proprietary, international ID that provides you with a persistent digital identifier that distinguishes you from every other researcher. It is strategically important because it enables all databases to automatically link publications to you by your ORCID. At ORCID you can create a profile, link it to your Scopus ID, ResearchID and/or import publications from a so-called crossref search. Further functionality is being developed.

1. Go to ORCID, register for an ORCID ID (under "for researchers") and complete your profile
2. Click "import research activities" and follow instructions to import publication details from e.g. Scopus
3. Click "view public ORCID record" to check whether it does not show anything you do not like to be publicly visible

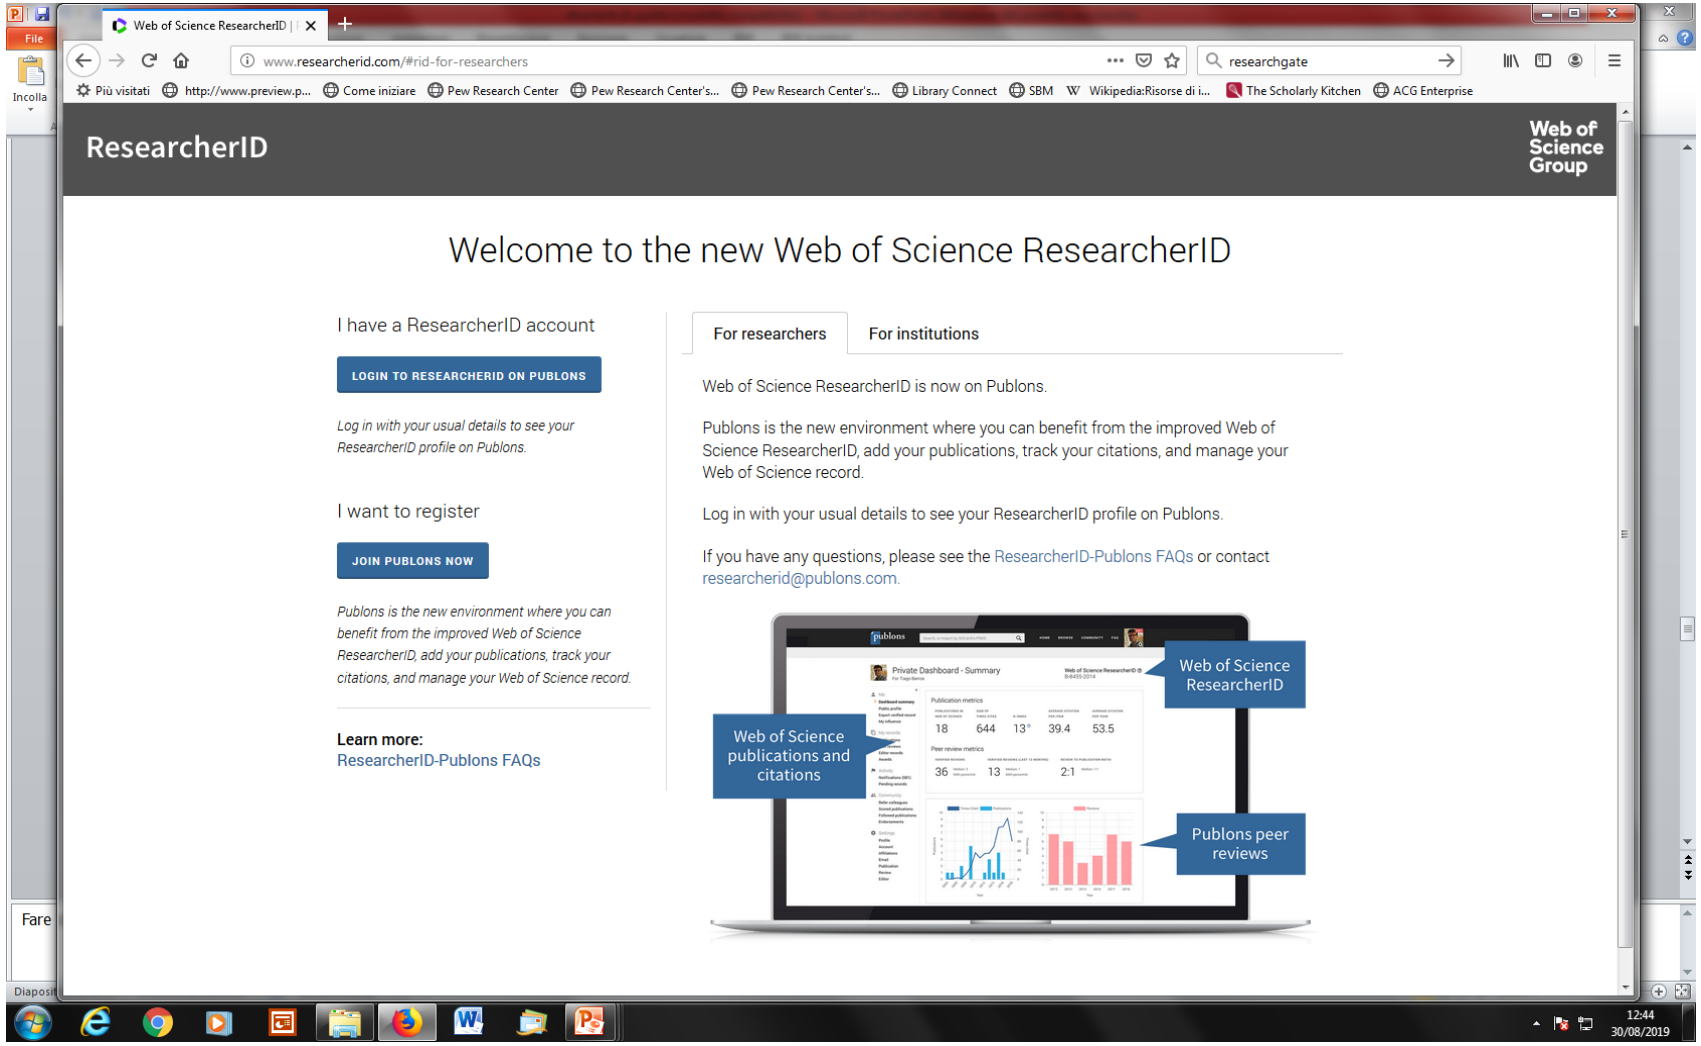
- More about the ORCID registry

MORE VISIBLE WITH A RESEARCHERID IN THREE STEPS

ResearcherID is the profile tool from Thomson Reuters, the owners of Web of Science and the Journal Citation Reports. Researcher ID offers a public profile. You can choose what to show publicly. Researcher ID is also important as a basis to provide feedback to Web of Science for grouping author name variants or corrections to affiliations.

1. Go to Researcher ID, sign up and complete your profile.
2. Add some publications if you have a few listed in Web of Science and preview the public version of your profile.
3. If you already have made an ORCID ID you can link Researcher ID to that. It is best to do that in a place where you have access to Web of Science.

http://www.researcherid.com/#rid-for-researchers



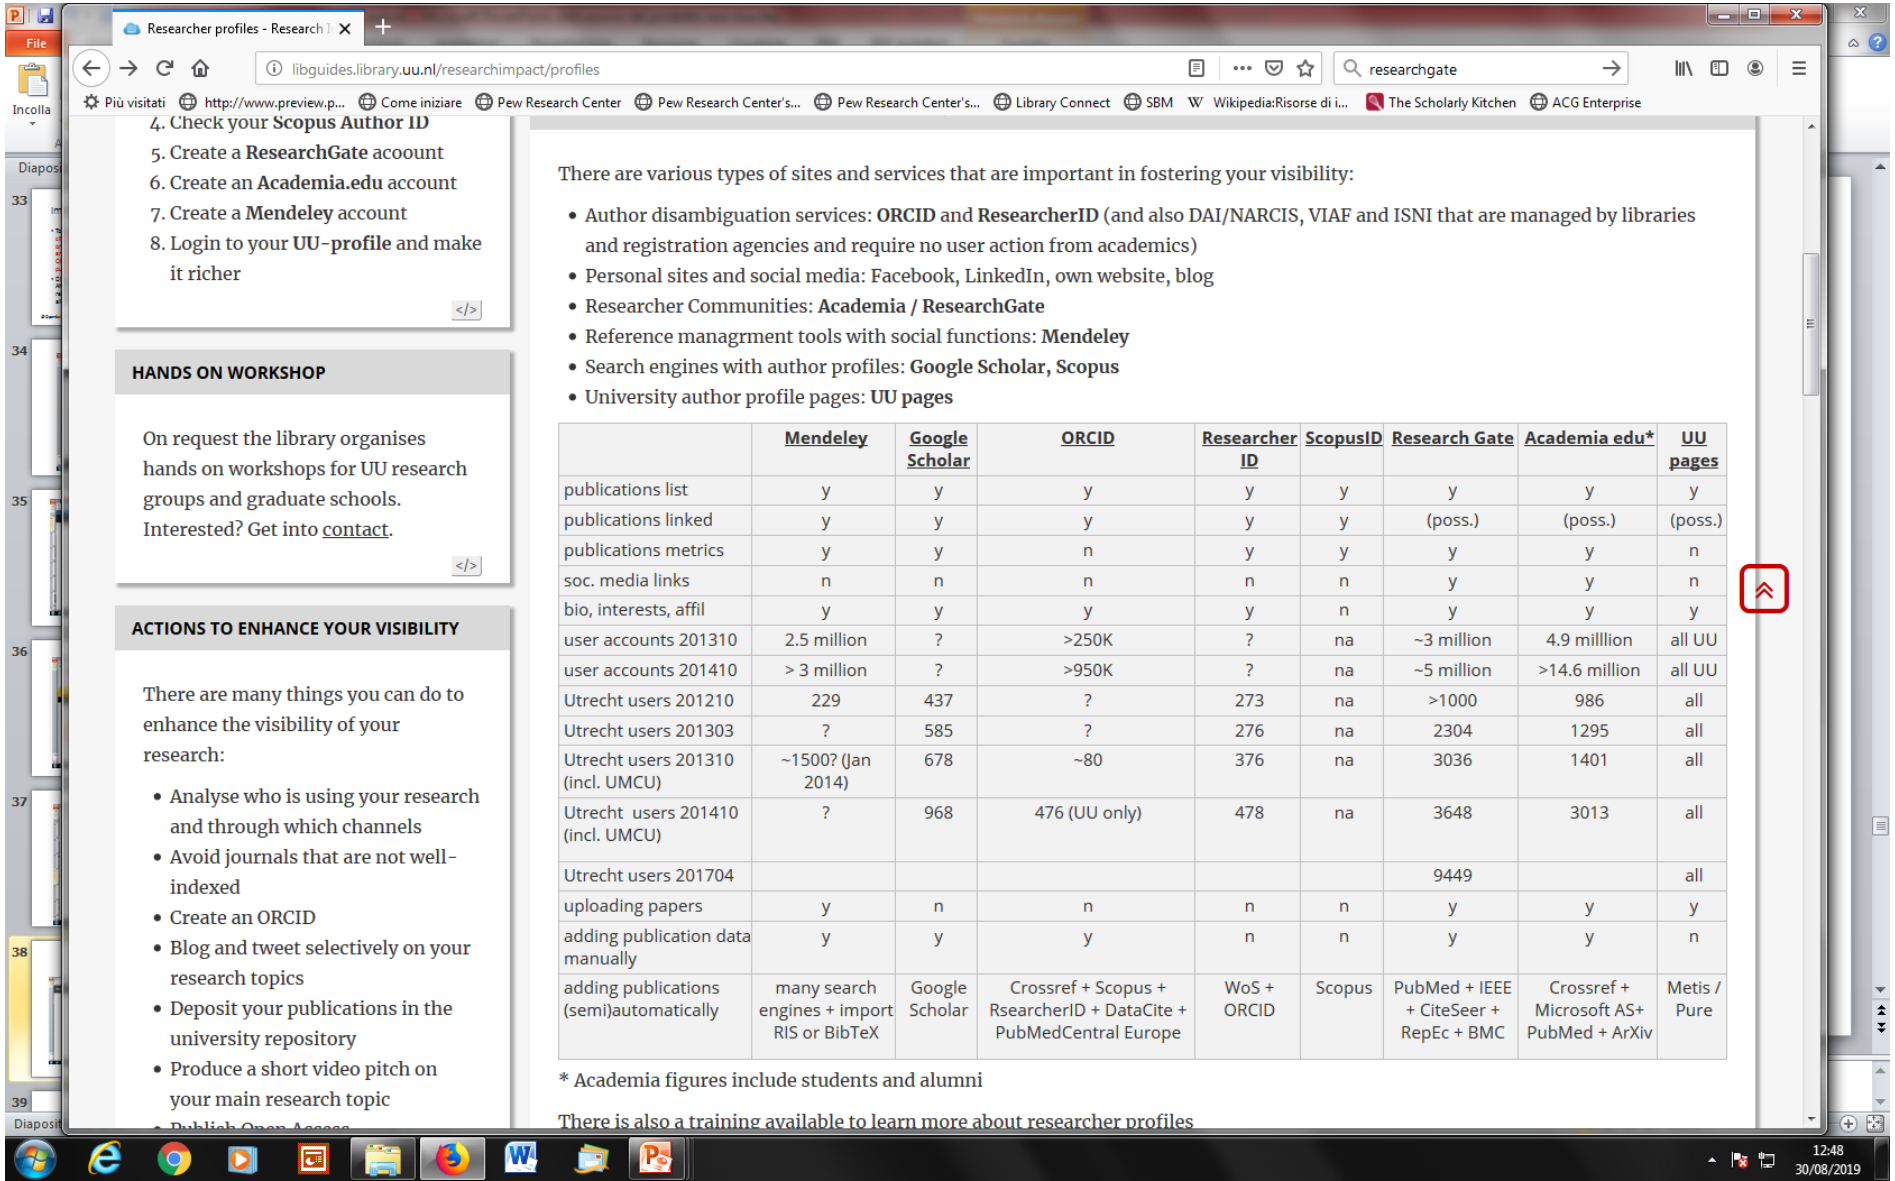
ResearcherID is the profile tool from **Thomson Reuters**, the owners of ***Web of Science*** and ***the Journal Citation Reports***

Researcher ID offers a public profile. You can choose what to show publicly

Researcher ID is also important as a basis to provide feedback to *Web of Science* for grouping author name variants or corrections to affiliations

Riepiloghiamo:
Perché creare un profilo autore on line?

Fonte: Guida della Università di Utrecht
http://libguides.library.uu.nl/researchimpact/profiles



4. Check your **Scopus Author ID**
5. Create a **ResearchGate** acoount
6. Create an **Academia.edu** account
7. Create a **Mendeley** account
8. Login to your **UU-profile** and make it richer

HANDS ON WORKSHOP

On request the library organises hands on workshops for UU research groups and graduate schools. Interested? Get into contact.

ACTIONS TO ENHANCE YOUR VISIBILITY

There are many things you can do to enhance the visibility of your research:

- Analyse who is using your research and through which channels
- Avoid journals that are not well-indexed
- Create an ORCID
- Blog and tweet selectively on your research topics
- Deposit your publications in the university repository
- Produce a short video pitch on your main research topic

There are various types of sites and services that are important in fostering your visibility:

- Author disambiguation services: **ORCID** and **ResearcherID** (and also DAI/NARCIS, VIAF and ISNI that are managed by libraries and registration agencies and require no user action from academics)
- Personal sites and social media: Facebook, LinkedIn, own website, blog
- Researcher Communities: **Academia / ResearchGate**
- Reference managrment tools with social functions: **Mendeley**
- Search engines with author profiles: **Google Scholar, Scopus**
- University author profile pages: **UU pages**

h-index on Publons
Modified on: Thu, 23 May, 2019 at 9:06 AM
Your h-index on Publons is calculated using citation data from Web of Science Core Collection, based on the publications you have imported to Publons. Only Core Collection publications and citations (including self-citations) are included in the h-index calculation on Publons.
Displaying the h-index on your profile is optional
You can change the h-index visibility setting at any time from your profile settings. (Note it will still be visible to you alone on your private dashboard.)
Use the h-index responsibly
The h-index's popularity as a bibliometric indicator is because it is simple to calculate and combines measures of productivity (number of published articles) and impact (number of citations) in one index. When used alongside other measures, it can quickly indicate how citations are distributed over a researcher's publications.
This popularity has led to misuse — particularly when it is treated as proof of productivity and impact, rather than a potential indicator of productivity and impact. Due to differences in publication and citation behaviour between fields (even closely-related fields) and because the h-index does not control for career-stage, it is unwise to draw any serious conclusions from h-index comparisons between researchers.
At Publons we are aware that many researchers and institutions use the h-index, while others prefer not to because of the tendency for it to be misused. Accordingly, we have made it optional for researchers to display their Web of Science h-index on their Publons profile and encourage researchers to become familiar with the scope and limitations of the h-index as an indicator.
About the h-index
The h-index (also known as Hirsch index) was introduced by J. Hirsch in 2005 and can be defined as follows: A researcher has an h-index, if they have at least h publications for which they have received at least h citations. For example, Researcher A has an h-index = 13 if they have published at least 13 documents for which they have received at least 13 citations.

Journal Citation Reports Indicators

The InCites "journals, Books, Conferenences, & Proceedings:" Explorer includes Journal Citation Reports (JCR) journal indicators and links to JCR Journal Profiles within the results table. For analyses focused on research producers, these indicators identify the share of work published in top journals, enhancing promotion or enabling strategies for improved standing within the community and among competitors. Publishers can now leverage the improved features of InCites Benchmarking to track performance of journals, identify significant contributors, and benchmark against peers.

Details:

- For all indicators in *InCites*, the time period will dictate the JCR year of the indicator displayed
- For instance, a time period filter of 1980-2017 will display the 2017 JCR indicator. A time period filter of 1980-2012 will display the 2012 JCR indicator
- All indicators are covered from 1997-2017

The following JCR indicators are available in the *InCites* Explorer:

Journal Impact Factor

The Journal Impact Factor is defined as all citations to the journal in the current JCR year to items published in the previous two years, divided by the total number of scholarly items (these comprise articles, reviews, and proceedings papers) published in the journal in the previous two years. Though not a strict mathematical average, the Journal Impact Factor provides a functional approximation of the mean citation rate per citable item.

Journal Impact Factor Without Self Cites

The Journal Impact Factor calculated after citations from journal articles to the journal in which they are published have been removed from the total count.

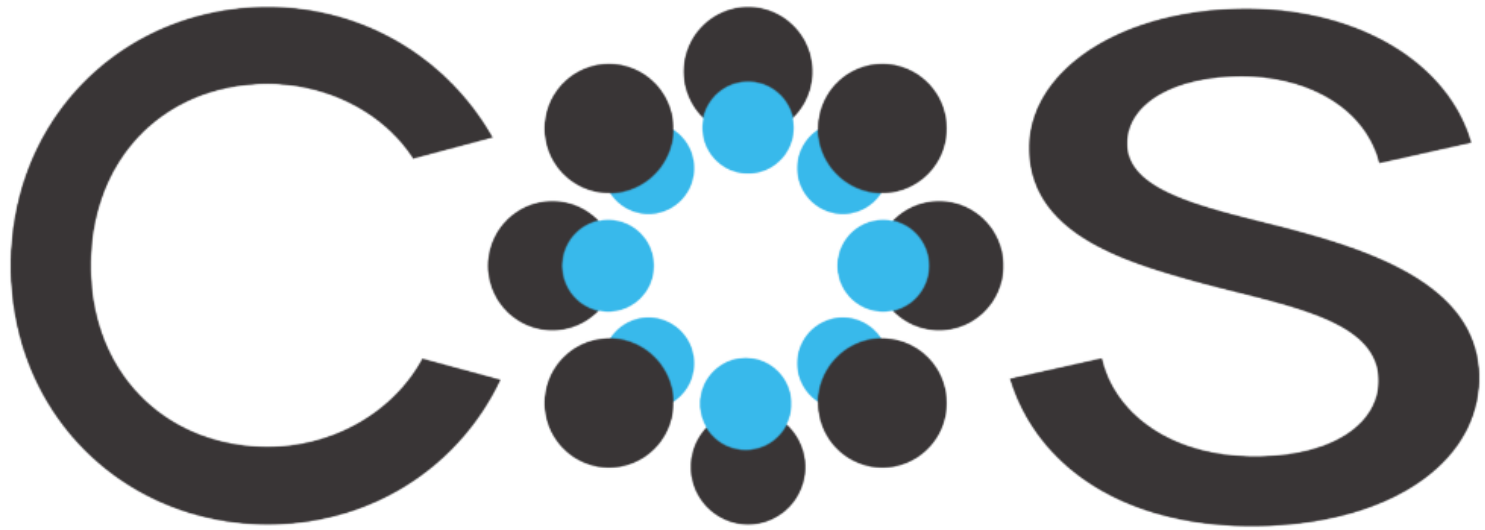
5 Year Journal Impact Factor

The 5 Year Journal Impact Factor is the average number of times articles from the journal published in the past five years have been cited in the JCR year. It is calculated by dividing the number of citations in the JCR year by the total number of articles published in the five previous years.

Cited Half-Life

Median age of the articles that were cited in the JCR year. Half of a journal's cited articles were published more recently that the cited half-life.

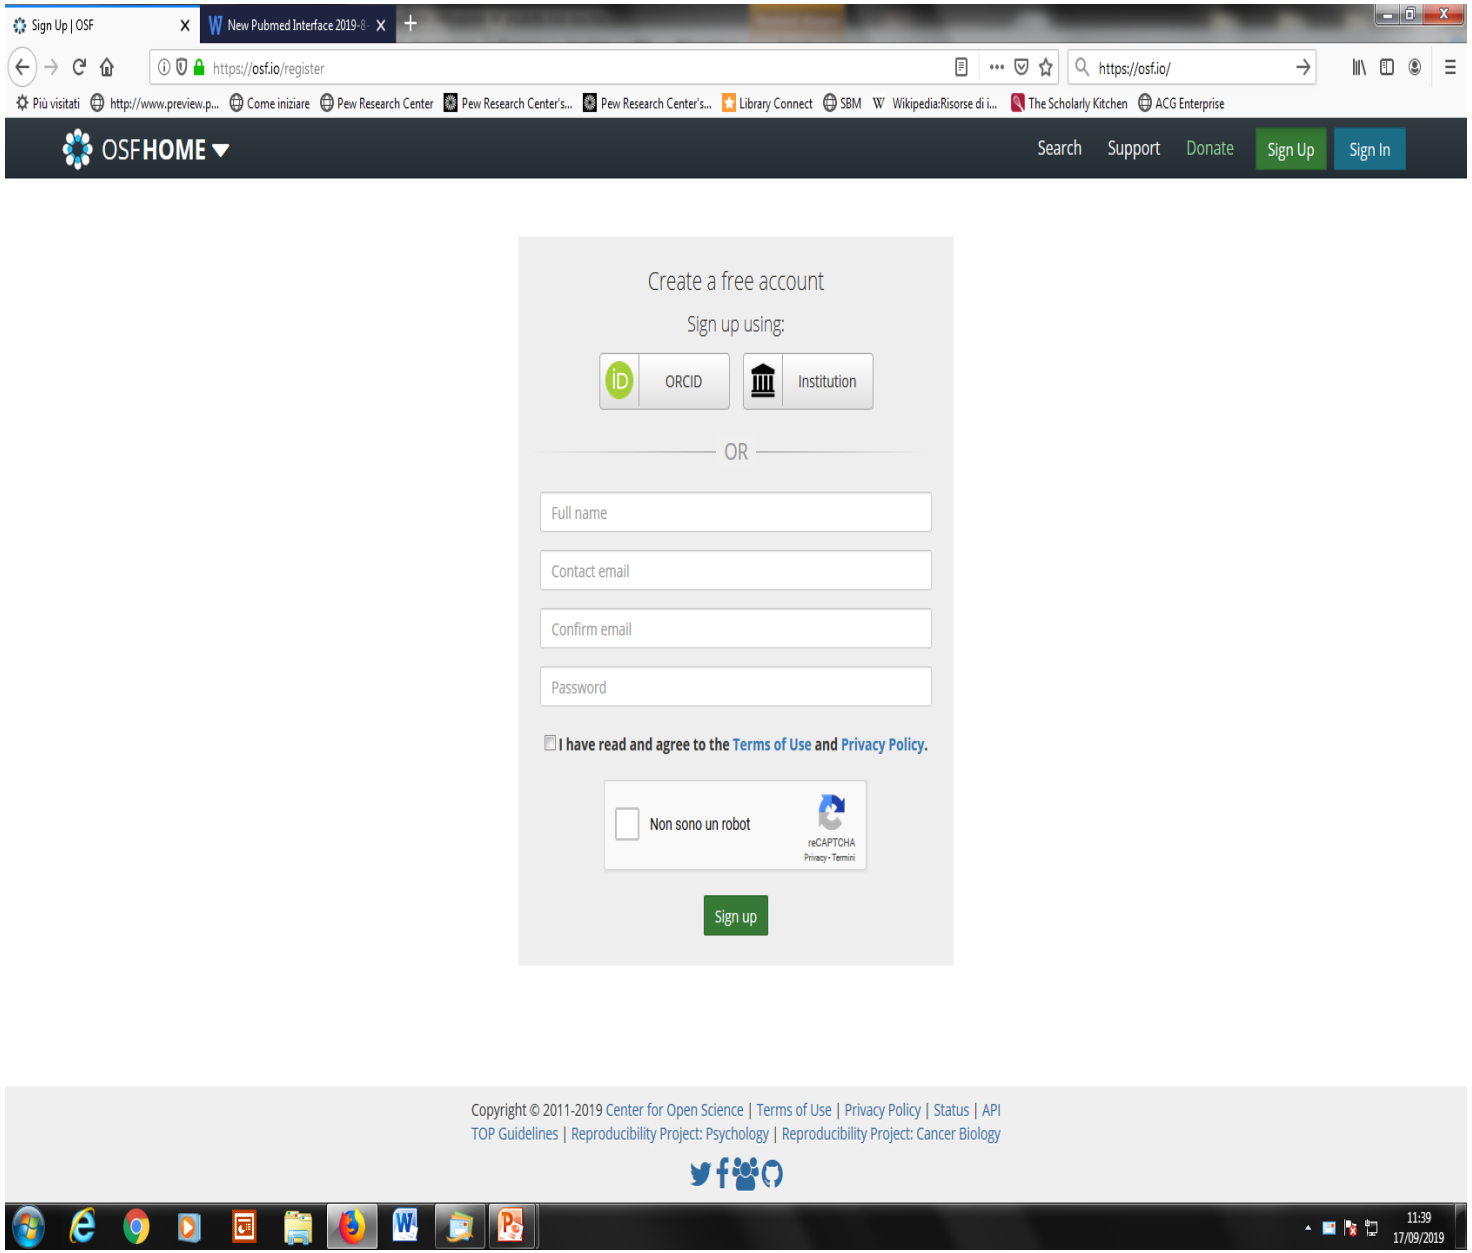
A complete discussion of journal self-citation in *Journal Citation Reports* can be found here: https://clarivate.com/essays/journal-self-citation-jcr/



CENTER FOR
OPEN SCIENCE

Opening up your research with the Open Science Framework

- Head to the **Open Science Framework** homepage, and click 'Sign up’
  https://osf.io/
- Again, you should have a chance here **to sign in or sign up using your ORCID profile, or through an institutional profile**
- Once logged in, you w ill be taken to your dashboard, which contains a **rolling list of the various projects integrated with your OSF pr**ofile
- Of course, if you have only just set up your account this will be blank for now



Sign Up | OSF

OSF features

- OSF Registries - Which includes more than 270.000 registrations, which you can learn more about here
- OSF Meetings - A place where conference organisers can arrange a free poster and presentation sharing service for their events
- OSF Institutions - Basically the OSF, but operating at the institutional level to increase transparency, collaboration, and visibility of research
- OSF Preprints - A searchable database of more than 2 million preprints, across more than 20 OSF-branded and community-governed platforms

Checklist for author profile

- So hopefully now you have the basics elements of **your personalised, online researcher profile** completed, this provides a great way to show case your work:
- **to increase and track your research impact**
- **to and receive appropriate credit for all of this**

- Just to make sure, now you should have:
  - ☐ **A personal ORCID profile**, with any publications associated with this
  - ☐ (An **ImpactStory profile** to help track and show case the social attention that your research gets)
  - ☐ An **Open Science Framework** profile, to begin openly collaborating and managing your research
  - ☐ **a Publons profile** to track your peer review record

Next steps?

- From here on, much of this will be automatically **populated** as your work progresses
- But some advice is **to check your ImpactStory regularly**, to see who is sharing your work and in what context, and to make sure that as much of your research is openly available (e.g., code, articles, data) **via the Open Science Framework** as possible
- Finally, if you created a Publons profile, make sure **to update** this as you review new articles in the future to keep track of this important work
- How you develop your own digital research profile in the future will be down to each individual, but hopefully this is enough for now to **give you a good boost**!

Thanks! How to stay in touch:

- Join our open Slack channel: https://osmooc.herokuapp.com/
- Join our open GitHub team: https://open-science-mooc-invite.herokuapp.com/
- Follow us on Twitter: @OpenScienceMOOC
- Email: info@opensciencemooc.eu
- Join our mailing list: https://opensciencemooc.eu/contact/
- Join us on Facebook: https://www.facebook.com/OpenScienceMOOC

Impactstory

Create your own **Impact Story**

- **ImpactStory** is a non-profit dedicated to making scholarly research more open, accessible, and reusable. It helps to provide a fun and lightweight profile that integrates social media mentions, badges, and **more with your ORCID record**
- Head on over the ImpactStory website. Here, you can join for free using Twitter. If you don't have a Twitter account yet, no worries

  https://profiles.impactstory.org/

- After logging in with Twitter, you can link it directly and authorise ImpactStory to use your ORCID profile that you just created in the settings

- In the future, you can make sure **your profile is up to date in the ImpactStory settings by syncing data from ORCID**. It does this automatically, but you can manually update it too, for example whenever you publish a new paper

OVERVIEW ACHIEVEMENTS TIMELINE PUBLICATIONS

ACHIEVEMENTS

view all

Open Hero Top 10%

Every single one of your papers is free to read online. Wow! That's a level of access only 2% of other researchers achieve. Open access helps real people, and that's pretty heroic.

Wikitastic Top 10%

Your research is mentioned in 18 Wikipedia articles! Only 1% of researchers are this highly cited in Wikipedia.
